

PumpGuard™

Annual Service Program

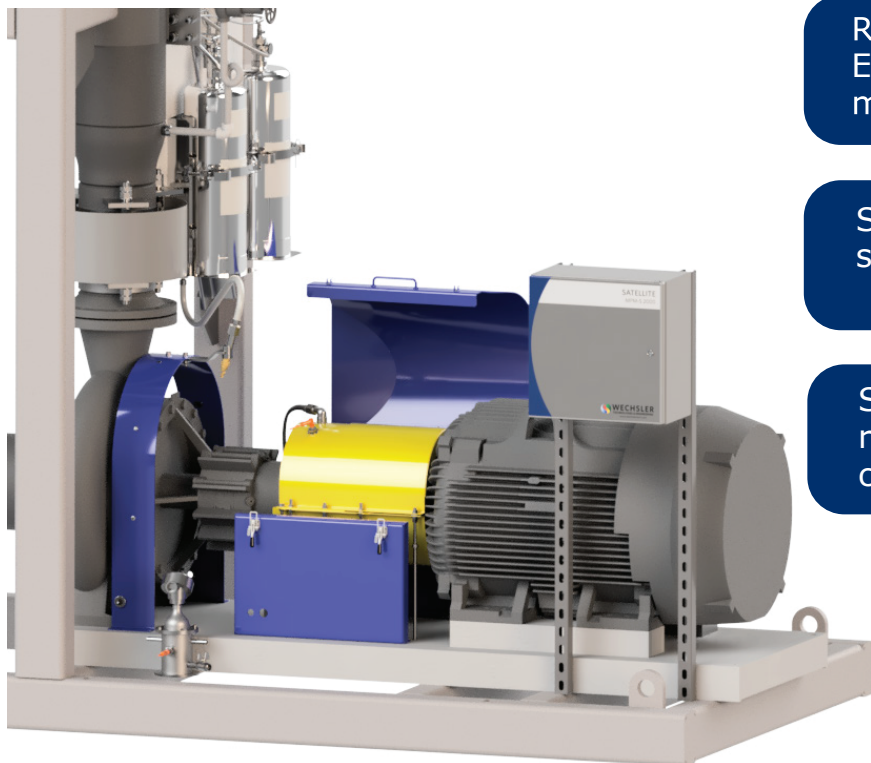

Wechsler Technologies is offering an annual service program to inspect the PumpGuard Systems to help your mill keep it armed and active, ready to discharge in the event of a thermal oil pump fire.

Peace of mind: Quarterly expert maintenance checks and certification

Relieve the burden on plant personnel: Expertly maintained quarterly to manufacturer's requirements

Savings: Discounted spare parts and services

Stay up to date: Discounts on recommended system upgrades to current generation

As a fire safety system, it is required that the PumpGuard Pump Protection System be inspected and maintained on a regular basis. From our years of experience installing and servicing these systems, WTE has found that a 3-month service interval will provide optimum reliability. An expertly performed third party service will relieve the burden on plant personnel to maintain the systems and ensure that the PumpGuard is ready to protect when you need it most!

Let's talk about optimizing and protecting your process heating environment.
